Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in

the application:

1. (Currently Amended) A microsystem for determining clotting time of

blood, the microsystem comprising:

a single-use device including: a microfluidic channel formed in the device; inlet

and outlet ports in fluid communication with the channel wherein the inlet port allows the

introduction of blood into the channel and wherein the blood flows along a length of the

channel; and a microsensor at least partially in fluid communication with the channel for

sensing a property of the blood at various locations along the length of the channel and

providing corresponding signals wherein the microsensor includes a pair of spaced, conductive

traces extending along the length of the channel and wherein the conductive traces are variably

spaced along the length of the channel; and

a signal processor for processing the signals to obtain the clotting time.

2. (Cancelled)

3. (Cancelled)

4. (Cancelled)

5. (Currently Amended) The microsystem as claimed in claim [[2]] 1,

wherein at least one of the conductive traces is segmented at predetermined intervals along the

length of the channel.

6. (Currently Amended) The microsystem as claimed in claim [[2]] 1,

wherein the conductive traces are conductive metal or carbon traces.

S/N: 10/737,422 Atty Dkt No. UOM 0282 PUSP Reply to Office Action of May 15, 2007

7. (Original) The microsystem as claimed in claim 1, wherein the channel

is spiral-shaped to minimize footprint size of the device.

8. (Original) The microsystem as claimed in claim 7, wherein the

microsensor is also spiral-shaped.

9. (Original) The microsystem as claimed in claim 7, wherein the

microsensor is spoke-shaped.

10. (Original) The microsystem as claimed in claim 1 wherein the signal

processor includes a circuit for processing the signals to obtain a stop signal which indicates

that the blood is clotted.

11. (Original) The microsystem as claimed in claim 1, wherein the property

of the blood is at least one of impedance and capacitance of the blood in the channel.

12. (Original) The microsystem as claimed in claim 2, wherein the

conductive traces includes Ag/AgCl, gold, platinum or iridium lines at least partially disposed

in the channel.

13. (Original) The microsystem as claimed in claim 1, wherein the

microsensor includes a set of spaced conductors disposed in the channel adjacent the inlet port

to provide a start signal when the blood is first introduced into the channel and wherein the

signal processor processes the start signal.

14. (Original) The microsystem as claimed in claim 1, wherein the device

further includes a substrate and a cap having the inlet port, the channel being disposed between

the cap and the substrate.

15. (Currently Amended) A low-cost, single-use device for analyzing blood

coagulation, the device comprising:

a microfluidic channel;

inlet and outlet ports in fluid communication with the channel wherein the inlet

port allows the introduction of blood into the channel and wherein the blood flows along a

length of the channel; and

a microsensor at least partially in fluid communication with the channel for

sensing a property of the blood at various locations along the length of the channel and

providing corresponding signals wherein the microsensor includes a pair of spaced, conductive

traces extending along the length of the channel and wherein the conductive traces are variably

spaced along the length of the channel.

16. (Cancelled)

17. (Cancelled)

18. (Cancelled)

19. (Currently Amended) The device as claimed in claim [[16]] 15, wherein

at least one of the conductive traces is segmented at predetermined intervals along the length

of the channel.

20. (Currently Amended) The device as claimed in claim [[16]] 15, wherein

the conductive traces are conductive metal or carbon traces.

21. (Original) The device as claimed in claim 15, wherein the channel is

spiral-shaped to minimize footprint size of the device.

22. (Original) The device as claimed in claim 21, wherein the microsensor

is also spiral-shaped.

23. (Original) The device as claimed in claim 21, wherein the microsensor

is spoke-shaped.

24. (Original) The device as claimed in claim 15, wherein the property of

the blood is at least one of impedance and capacitance of the blood in the channel.

25. (Original) The device as claimed in claim 16, wherein the conductive

traces includes Ag/AgCl, gold, platinum or iridium lines at least partially disposed in the

channel.

26. (Original) The device as claimed in claim 15, wherein the microsensor

includes a set of spaced conductors disposed in the channel adjacent the inlet port to provide

a start signal when the blood is first introduced into the channel.

27. (Original) The device as claimed in claim 15, further comprising a

substrate and a cap including the inlet port, the channel being disposed between the cap and

the substrate.

28. (Original) The microsystem as claimed in claim 1, wherein the blood

flows in the channel by capillary action or laminar flow.

29. (Original) The device as claimed in claim 15, wherein the blood flows

in the channel by capillary action or laminar flow.
